Q: Multi-model focus-less scrollbar in IE I need to make a multi-model scrollbar in Internet Explorer 8 and below. The "horizontal" and "vertical" scrollbars are ok but when I add the "xy" scrollbar, it doesn't work properly in IE8 and below. As you can see in the picture, the horizontal scrollbar has to scroll independently of the xy scrollbar, even if the mouse is over the xy scrollbar. How can I do that? Thanks! A: You can customize the scrollbars in IE by changing their 'overflow' property. For example, this will remove the scrollbars: scrollbar:-ms-thumb { display: none; } and this will add the vertical scrollbar: scrollbar-vertical:-ms-thumb display: inline-block; Here's a full example: We were absolutely delighted to present the Game of Thrones season 5 premiere party at the world-renowned London Film Festival. The evening was a chance for everyone to celebrate together as an industry and I wanted to personally thank everyone for a wonderful evening and for a fantastic few days in London. There was no shortage of dragons, ice and fire as we welcomed Theon back to King's Landing for the first time since his story began, after a long winter and many events that have changed the course of the entire show. As the evening began, all of us could see the excitement in the room as everyone was waiting in anticipation to see what the action was going to be like. We were delighted to see that an entire section of the room was occupied by Hizb Ut-Tahrir, the Islamic Party of Britain who had arranged a visit to a screening of Game of Thrones. I looked round and thought to myself, 'I'll never see an event like this again,' in terms of organisation, enthusiasm and generosity. The evening was a celebration of the show and everyone on our team was aware of that and were quite deliberate in that. We wanted to show how amazing this show is, how much people from all over 82157476af
